

Final Website Pricing & Monday Meeting Guide

Recommended Website Price

Recommended introductory price: R4,500 – R6,500

Payment Terms:

- 50% deposit before work begins.
- Remaining 50% after approval and before the website goes live.

Included

- Custom homepage
- About section
- Services section
- Gallery
- Contact section
- Footer
- Responsive design (mobile/tablet/desktop)
- Google Maps
- WhatsApp button
- Basic SEO
- Two rounds of revisions

Simple Explanations

Responsive Design: The website automatically looks good on phones, tablets, laptops and desktop computers.

Basic SEO: The website is prepared so Google can understand it better using proper titles, headings and image descriptions.

Two Rounds of Revisions: After the first version, the client can request changes twice. Any major changes after that are quoted separately.

Optional Extras

Feature	Price
Gallery with Prices	R500
Dedicated Price List Page	R700
Booking Request Form	R900
Custom Booking System	Quoted separately
Extra Custom Page	R500–R900
Extra revisions	R350/hour

Maintenance Plans (Optional)

Plan	Price
------	-------

Basic	R300/month
Standard	R600/month
Premium	R1,000/month

Important

Domain registration, hosting and SSL are third-party services and are NOT included in my development fee. The client pays these costs directly. I can assist with setup, but they are separate from my charges.

Typical Third-Party Costs

- Domain: R180–R350/year
- Hosting: R80–R250/month
- SSL: Usually free.

Meeting Questions

- Do you like the design?
- Would you like any changes?
- Would you like a Gallery with Prices?
- Would you like a future booking system?
- Would you like monthly maintenance?

Extra Explanations:

SSL Certificate

SSL stands for **Secure Sockets Layer**.

It encrypts information sent between the visitor's browser and the website.

You'll know a website has SSL if you see:

https://

instead of

http://

and usually a  padlock in the browser.

Why is SSL important?

It:

- Protects visitors' information
- Makes the website more secure
- Helps Google trust the website
- Prevents browser warnings like "Not Secure"

Nowadays, most hosting companies include SSL **for free**.

Booking Request Form (R900)

- Customers fill in a form with their details and preferred appointment.
- The request is sent to the salon by email.
- It can also be saved in a database for record-keeping.
- The salon contacts the customer to confirm the appointment.
- **This is not an automatic booking system.**

Why Save to a Database?

- Keeps a secure record of all booking requests.
- Makes it possible to build an admin dashboard in the future.
- The salon owner **does not** access the database directly.

Custom Booking System (Quoted Separately)

- Customers choose an available date and time and book online.
- Bookings are stored in a database.
- The salon owner logs into a secure **admin dashboard** to manage appointments.

Admin Dashboard

An admin dashboard is **not a separate website**. It is a private, password-protected section of the same website (for example, yourwebsite.co.za/admin).

The salon owner can:

- View bookings
- Confirm or cancel appointments
- Edit bookings
- Manage customer appointments

The dashboard reads information from the database, so the salon owner never needs to access the database directly.

2. Domain Name (Paid by the Client)

A domain is the website address people type into their browser.

Example:

www.levelsonice.co.za

You buy a domain from a **domain registrar**.

- Some South African companies include:
 - Domains.co.za
 - xneelo
 - Afrihost

- Typical cost:
 - **R180–R350 per year**
- The **client pays** for this because they own the business and should own the domain.

3. Hosting (Paid by the Client)

Hosting is where the website files live so people can visit the website online.

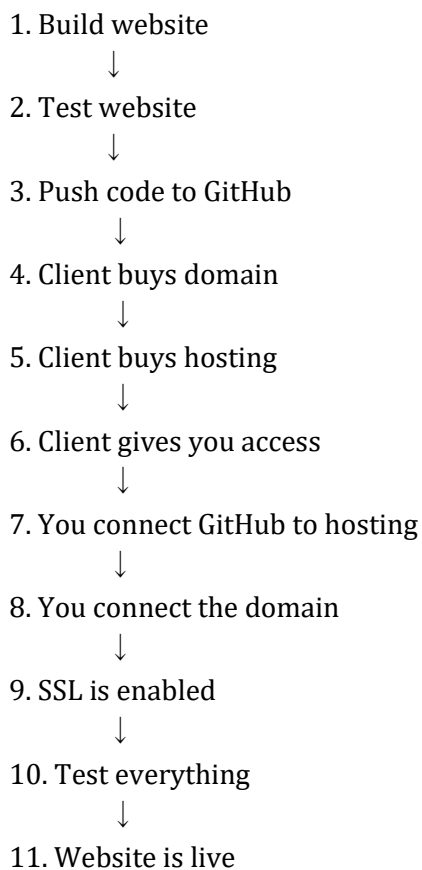

Some hosting providers include:

- Vercel (excellent for Next.js)
- xneelo
- Afrihost
- HostAfrica

Typical cost:

- **R80–R250 per month** (depending on the provider and plan)

Again, the **client pays** because it's their website.

After the website is live:

1. Ask the owner to log in to their **Google Business Profile**.
2. Click **Edit Profile**.
3. Find the **Website** field.
4. Replace the old website (or leave it blank if there isn't one).
5. Enter:

<https://www.levelsonice.co.za>

6. Click **Save**.

That's it.

Now, when someone searches "**Levels On Ice**" on Google or Google Maps, they'll see a **Website** button that takes them to the new website.
